

S1 is proud to introduce our Checkpoint Friendly Laptop Bags and Backpacks which meet all Transit Security Administration guidelines as Checkpoint Friendly so there is no longer a need to remove your laptop at security checkpoints. The TSA approached several bag companies and requested that we design bags to follow specific criteria which would enable travelers to go through airport security without having to remove their laptops. S1 submitted our designs and having followed their specifications we are proud to add these bags to our product line.

It is also with great pride that we bring our Made in the USA 100% Green Checkpoint Friendly Laptop Bags and Backpack to market. These three styles are S1's first bags not only made here in the US, but that are constructed in 100% recycled materials – making them stronger than other bags made with Denier materials – all the while protecting our environment. S1 stands for Safety First – and with this line of bags – we here at S1 continue our evolution of bringing products to the market that address safety issues worldwide.

As a mother of three, I first became frustrated with the low quality of most clear bags on the market since our nations children and schools are facing safety challenges like never before. The tragedy's our students and teachers have faced since Columbine began a mission to find a way to keep our children safe. With four of the best people I know in their fields S1 for 'Safety First' began. Together, we set out to design bags that are cool, comfortable and durable, since as consumers we have all learned that 'cheap is expensive'. At the same time we wanted to face these safety issues head-on with our premium line of clear bags, backpacks, wheelchair bags, sports bags and travel bags.

We began designing our bags and backpacks by consulting with Chiropractors to ensure they are ergonomically correct and worked with manufacturing specialists to find the strongest materials available. S1 Bags are constructed in a 20-gauge 5mil temperature-treated PVC Vinyl, which is the thickest material available that still offers pliability; this guarantees that our bags are clearly safer, clearly stronger and clearly more comfortable than any other transparent bags on the market. All S1 bags carry a 3-year warranty.

What began as a way to keep our children safe has expanded into the finest line of clear bags worldwide. S1 has begun working with corporations, sports arenas, airports and other public venues to assist with the security measures they are now implementing as safety has become a daily concern.

The S1 team is committed to developing new and innovative clear and green bags and backpacks to make it easier for safety and convenience to co-exist. Together, we can make a difference.

We're S1 - The CLEAR Advantage!"
